Instructions:

1. Download, extract and build the two attachments

2. Add a reference to AKLib from your designer

3. Copy SimpleUpdater.exe to your applications directory

4. Create a file called '**current.txt**'

   - Layout of the file should be like this:
     Legend: The file that you want to update,current version,the folder where you want to download the update

     myApplication.exe,1.0.0.0,C:\MyApplication
     myDll.dll,1.0.0.0,C:\MyApplication
     etc...

5.
   - Copy '**current.txt**' to your applications directory

6. Create a file called '**recent.txt**'
   - Layout of the file should be like this:
     Legend: File on update server,newest version,the url to the file

     myApplication.exe,2.0.0.0,http://www.myserver.com/updates/myApplication.upd
     myDll.dll,1.1.0.0,http://www.myserver.com/updates/myDll.upd
     etc...

7.
   - Upload '**recent.txt**' to your site

8. Usage:
   - From a Button.Click event:

     vb Code:

```
1. Private Sub btnUpdate_Click(ByVal sender As
   System.Object, ByVal e As System.EventArgs) Handles
   btnUpdate.Click
2.     Me.btnUpdate.Enabled = False
3.
4.     Dim currentVersions As String =
   "C:\MyApplication\current.txt"
```

```
5.      Dim recentVersions As String =
   "http://www.mySite.com/recent.txt"
6.      Dim pathSimpleUpdater As String =
   "C:\MyApplication\SimpleUpdater.exe"
7.
8.      AKLib.SimpleUpdater.FromDefinedList(currentVersion
   s, recentVersions, pathSimpleUpdater)
9.
10.   End Sub
```

- Ta-da

9. Credits to:
   - Zeljko and chris128 for showing me how easy it was to compare two versions against each other

10. Disclaimer: ***There is basicly no error handling in this code, and I have only tested it on one computer, so is to be used at your own risk***
